This is one of the two IFS built for the UTA F-GEXA. Thanks for all your help, it's greatly appreciated. I've been flying FSX for quite a while and I have a few questions. One is how do you find out the hours on the engines on the 737 MAX? Also, if you do change the livery, is there any way to change the color of the nav lights that are on top of the tail? Thanks in advance. It is interesting but you need to be patient I found out the hard way. SimBinware has an amazing support system that I personally use. I posted a question there and the support staff worked with me. I thought about doing that because you won't be able to find any info on simBin. Go to their support and ask for help, I did. That might help. I can't answer your second question but I'll say this.

You can change the nav lights, as long as you have the correct bits to change the color of them. I used to use the Garmin BG-1700 and that was pretty easy to change. Hope this helps. In the previous post I indicated that I use SimBinware for their support. They are so friendly and helpful. They didn't find the answer for me, they actually changed the color of the lights for me. I thought that might be useful to someone. Now there are different types of lights so pay attention to what is needed for your aircraft. SimulationX-planes can be used for these tasks, I have not tried them. I use Win7 ultimate and my video card is at 2 GB. I have an AMD FX 8150 CPU. Still the plane flies, so I do not care about speed, I just fly. I use X-Plane 11 as my flight simulator. I don't care if you choose a different one, as long as it flies, any will do. Have fun and good luck. Release Notes: The release includes fixes for the following problems: - This item is used to enter and exit the Advanced Navigator mode. See the user guide for instructions. - Lateral stabilizer trim is now restored on taxi or on full power. - Various patches for the 737 MAX 10 and MAX 8. - Many other fixes and improvements for the 737 MAX 10 and MAX 8. Download: 737 MAX SP1 (10M) for FSX v2.1.47 SP2 – 'Aerosoft' livery FS 82157476af
